 Should Fix:

Eliminate render-blocking JavaScript and CSS in above-the-fold content

Your page has 1 blocking script resources and 1 blocking CSS resources. This causes a delay in rendering your page.

None of the above-the-fold content on your page could be rendered without waiting for the following resources to load. Try to defer or asynchronously load blocking resources, or inline the critical portions of those resources directly in the HTML.

[Remove render-blocking JavaScript:](#)

- <https://kiabeauty.ir/wp-content/cache/busting/1/wp-includes/js/jquery/jquery-1.12.4-wp.js>

[Optimize CSS Delivery](#) of the following:

- <https://kiabeauty.ir/wp-content/cache/min/1/0dec6b49575742e077545a8399d178de.css>

Consider Fixing:

Enable compression

Compressing resources with gzip or deflate can reduce the number of bytes sent over the network.

[Enable compression](#) for the following resources to reduce their transfer size by 3.1KiB (62% reduction).

- Compressing `https://e.dtscout.com/e/?v=1a&pid=5200&site=1&l=https%3A%2F%2Fkiabeauty.ir%2F&j=` could save 2.5KiB (63% reduction).
- Compressing `https://kiabeauty.ir/?wc-ajax=get_refreshed_fragments` could save 591B (60% reduction).

Leverage browser caching

Setting an expiry date or a maximum age in the HTTP headers for static resources instructs the browser to load previously downloaded resources from local disk rather than over the network.

[Leverage browser caching](#) for the following cacheable resources:

- `https://s10.histats.com/js15_as.js` (expiration not specified)
- `https://secure.gravatar.com/avatar/?s=140&d=mm&r=g` (5 minutes)
- `https://secure.gravatar.com/avatar/f51f43f9d3bcdbe47887f4136475703e?s=140&d=mm&r=g` (5 minutes)

Reduce server response time

In our test, your server responded in 0.44 seconds.

Mobile

There are many factors that can slow down your server response time. [Please read our recommendations](#) to learn how you can monitor and measure where your server is spending the most time.

Minify JavaScript

Compacting JavaScript code can save many bytes of data and speed up downloading, parsing, and execution time.

[Minify JavaScript](#) for the following resources to reduce their size by 1.1KiB (27% reduction).

- Minifying <https://e.dtscout.com/e/?v=1a&pid=5200&site=1&l=https%3A%2F%2Fkiabeauty.ir%2F&j=> could save 1.1KiB (27% reduction).

Optimize images

Properly formatting and compressing images can save many bytes of data.

[Optimize the following images](#) to reduce their size by 66.5KiB (80% reduction).

- Compressing and resizing <https://kiabeauty.ir/wp-content/uploads/2020/02/kharatin.jpg> could save 45.6KiB (97% reduction).
- Compressing <https://kiabeauty.ir/wp-content/uploads/2020/02/kharatin-390x220.jpg> could save 18.4KiB (61% reduction).
- Compressing https://kiabeauty.ir/wp-content/plugins/wpfront-notification-bar/images/arrow_down.png could save 1.2KiB (56% reduction).
- Compressing <https://secure.gravatar.com/avatar/?s=140&d=mm&r=g> could save 647B (31% reduction).
- Compressing <https://secure.gravatar.com/avatar/f51f43f9d3bcdbe47887f4136475703e?s=140&d=mm&r=g> could save 647B (31% reduction).

Prioritize visible content

Your page requires additional network round trips to render the above-the-fold content. For best performance, reduce the amount of HTML needed to render above-the-fold content.

The entire HTML response was not sufficient to render the above-the-fold content. This usually indicates that additional resources, loaded after HTML parsing, were required to render above-the-fold content. [Prioritize visible content](#) that is needed for rendering above-the-fold by including it directly in the HTML response.

- Only about 68% of the final above-the-fold content could be rendered with the full HTML response.
