! Should Fix:

Avoid landing page redirects

Your page has 2 redirects. Redirects introduce additional delays before the page can be loaded.

[Avoid landing page redirects](#) for the following chain of redirected URLs.

- <http://metalcruzado.com.br/>
- <http://www.metalcruzado.com.br/>
- <https://www.metalcruzado.com.br/>

Prioritize visible content

Mobile

Your page requires additional network round trips to render the above-the-fold content. For best performance, reduce the amount of HTML needed to render above-the-fold content.

The entire HTML response was not sufficient to render the above-the-fold content. This usually indicates that additional resources, loaded after HTML parsing, were required to render above-the-fold content. [Prioritize visible content](#) that is needed for rendering above-the-fold by including it directly in the HTML response.

- None of the final above-the-fold content could be rendered even with the full HTML response.

Consider Fixing:

Leverage browser caching

Setting an expiry date or a maximum age in the HTTP headers for static resources instructs the browser to load previously downloaded resources from local disk rather than over the network.

[Leverage browser caching](#) for the following cacheable resources:

- <https://js-agent.newrelic.com/nr-632.min.js> (2 hours)

Optimize images

Properly formatting and compressing images can save many bytes of data.

[Optimize the following images](#) to reduce their size by 5KiB (41% reduction).

- Compressing https://static.wixstatic.com/media/e0678ef25486466ba65ef6ad47b559e1.png/v1/fill/w_92,h_92,a1_c,usm_4.00_1.00_0.00/e0678ef25486466ba65ef6ad47b559e1.png could save 3.4KiB (56% reduction).
- Compressing https://static.parastorage.com/services/skins/2.1229.79/images/wysiwyg/core/themes/base/fade_line.png could save 1.5KiB (26% reduction).

 Consider Fixing:

Configure the viewport

Your page specifies a fixed-width mobile viewport. Consider using a responsive viewport to allow your page to render properly on all devices.

Mobile

[Configuring a viewport](#) specifying width=device-width instead of width=320 will allow your page to adapt for devices of various widths. This may require additional work if the styling on your page relies on a fixed-width layout.

Avoid plugins

Your page does not appear to use plugins, which would prevent content from being usable on many platforms. Learn more about the importance of [avoiding plugins](#).

Size content to viewport

The contents of your page fit within the viewport. Learn more about [sizing content to the viewport](#).

Size tap targets appropriately

All of your page's links/buttons are large enough for a user to easily tap on a touchscreen. Learn more about [sizing tap targets appropriately](#).

Use legible font sizes

The text on your page is legible. Learn more about [using legible font sizes](#).

Eliminate render-blocking JavaScript and CSS in above-the-fold content

Your page has 2 blocking CSS resources. This causes a delay in rendering your page.

None of the above-the-fold content on your page could be rendered without waiting for the following resources to load. Try to defer or asynchronously load blocking resources, or inline the critical portions of those resources directly in the HTML.
